An Army Corps of Engineers and NC Wildlife Resources Commission partnership to enhance the wildlife habitat surrounding Jordan Dam.

Work begins on the conversion process.

Coreopsis, *Coreopsis tinctoria* (picture to left) and Black-eyed-Susan, *Rudbeckia hirta (top)* attract butterflies and add color and beauty while helping to increase the prey base for wildlife up the food chain.

The proper flowers and bunch grasses create a healthy habitat of food and shelter forming the base of the food chain.
