

US Army Corps
Of Engineers
Wilmington District

PUBLIC NOTICE

Issue Date: October 13, 2005

Comment Deadline: November 14, 2005

Corps Action ID #: 199400453

All interested parties are hereby advised that the Wilmington District, Corps of Engineers (Corps) has received an application for work within jurisdictional waters of the United States. Specific plans and location information are described below and shown on the attached plans. This Public Notice and all attached plans are also available on the Wilmington District Web Site at www.saw.usace.army.mil/wetlands

Applicant: Mr. Gregory J. Thorpe, Ph. D.
Environmental Management Director, PDEA
N. C. Department of Transportation
1548 Mail Service Center
Raleigh, North Carolina 27699-1548

Authority

The Corps will evaluate this application and decide whether to issue, conditionally issue, or deny the proposed work pursuant to applicable procedures of Section 404 of the Clean Water Act.

Location

The proposed project involves improvements to US Highway 17 (T.I.P. No. R-2404A), beginning from US 13/17 south of Windsor to east of NCSR 1503 (Davis Road) in Bertie County, North Carolina. The proposed project is approximately 9.6 miles long and involves widening 2.3 miles of existing road from 2 to 4 lanes and 7.3 miles of new alignment 5-lane divided highway, including dual 1,700-foot bridges crossing the Cashie River. The proposed project is roughly located to the west, north, and east of Windsor and involves the crossing of three unnamed tributaries to the Cashie River, one unnamed tributary to Hoggard Mill Creek, and the Cashier River. The proposed project is located in the Roanoke River Basin, Hydrologic Unit 03010107. The southwestern starting point of the project is located at Latitude 35.9824797 N, Longitude 76.9574209 W. The eastern ending point is located at approximately Latitude 36.0182817 N, Longitude 76.8308079 W.

Existing Site Conditions

The project study area lies in the rural, unincorporated region of Bertie County. The population center in the study area includes the town of Windsor, North Carolina. Lands within the town limits and along US 13 Bypass and US 17 are classified as developed or urban transition according to the 1988 Bertie County Land Use Plan. The new location section of the selected alternative C2 (LEDPA) impacts mostly undeveloped forestlands and managed pine plantations. Residential properties generally consist of single-family frame or brick residences or mobile homes with outbuildings such as barns and sheds.

The topography in the study area is characterized as relatively flat to gently sloping terrain with an occasional steep slope along streams. Low areas, especially along the Cashie River floodplain are semi-to fully inundated with water much of the year. The study area is located in the Coastal Plain physiographic province of North Carolina.

Streams within the project area are located within the Roanoke River (USGS # 03010107) drainage area. The major drainage system in the project area is the Cashie River and unnamed tributaries to the Cashier River that drain into the Roanoke River system.

Jurisdictional wetlands in the study area are palustrine in nature as defined in Cowardin *et al.* (1979), and as identified on National Wetland Inventory (NWI) mapping. Some of these systems are defined as palustrine but are hydrologically riverine influenced. The wetland systems vary in vegetative composition, depending on hydrological regime and site-specific disturbances. Four wetland types were identified, palustrine forested, palustrine scrub-shrub, palustrine emergent, and palustrine unconsolidated bottom.

The types of general soil associations identified across the project area are: floodplains, stream terraces and uplands. Floodplain associations across the project area are located within the floodplains of the Cashie River. The upland associations can be differentiated into two types: those characterized by nearly level, poorly drained and very poorly drained soils; and those characterized by nearly level to sloping, well drained to somewhat poorly drained soils. Hydric soil mapping units within the project corridor include the Bibb, Bladen, Doravan, Leaf, Rains, Roanoke, and Wehadkee series (USDA 1991).

Applicant's Stated Purpose

The purpose of this project is to improve mobility through Bertie County on US 17 without delays caused by local traffic, improve travel service, improve hurricane evacuation and reduce evacuation travel times, reduce the number of accidents enhancing safety, and fulfill trust fund mandate to improve the intrastate system.

Background

This project is considered a “pipeline” project since it was initiated prior to the integration process for merging the National Environmental Policy Act and Section 404 of the Clean Water Act. The project was brought into the merger process at Concurrence Point 3, LEDPA selection. The Corps of Engineers issued an initial public notice for this project on March 4, 1999. The public notice described four construction alternatives to be considered, alternatives A, B, C1, and C2. The NEPA/404 Merger Team agreed in the selection of alternative C2 in November 1999, as the Least Environmentally Damaging Practicable Alternative (LEDPA).

Project Description

The following description of work is taken from data provided by the applicant. Proposed impacts to jurisdictional areas of T.I.P. R-2404A consist of 68.56 acres of permanent wetland impacts (4.05 acres of riparian wetlands, 64.51 acres of non-riparian wetlands, 0.66 acres of Department of Army non-jurisdictional isolated wetlands), 1.06 acres of fill in surface waters, and 2,035 linear feet of stream channel impacts (1,354 linear feet of important stream channel requiring mitigation and 681 linear feet of un-important channel not requiring mitigation), and 1.32 acres of temporary wetland impacts. The vast majority of proposed wetland impacts occur along the eastern half of the project at Sites 10, 12, 14, and 16 (see Table 4 below). These proposed impacts occur mainly in low quality non-riparian wetlands that are currently at various stages of silviculture management (recent clearcuts, newly planted pine stands, maturing pine plantations). Table 1 summarizes the jurisdictional impacts associated with R-2404A, Table 2 summarizes the impact sites, Table 3 summarizes the jurisdictional stream impacts, and Table 4 summarizes the wetland types and the associated impacts at each site. The Cashie River and its associated bottomland wetland system will be bridged with dual 1,700-foot structures thereby reducing wetland impacts. Utility relocation impacts have been assessed and are included in the above impacts.

Table 1: Summary of Impacts

Permanent Wetland* (acres)	Temporary Wetland^ (acres)	Isolated Wetlands (acres)	Streams^ (linear feet)	Streams Requiring Mitigation (lf)	Surface Waters# (acres)
68.56	1.32	0.66	2,035	1,354	1.06

* Wetland impact calculations include fill, excavation, and mechanized clearing; difference from permit impact summary sheet is due to inclusion of borrow/haul road impacts.

^ Difference from permit impact summary sheet is due to inclusion of haul road impacts.

Surface water calculations include ponds and streams without mitigation requirements; difference from permit impact summary sheet is due to rounding to two decimal places at each site.

Table 2: Summary of Impact Sites

Site No.	Permanent Wetland* (ac)	Temporary Wetland (ac)	Streams (lf)	Streams Requiring Mitigation (lf)	Surface Waters^ (ac)

* Impact Types: fill (F), excavation (E), and mechanized clearing (M)

Throughout the NEPA and design process this project has been designed to avoid and minimize impacts to jurisdictional areas. Specific strategies have been incorporated and commitments made by NCDOT to avoid and minimize jurisdictional impacts.

On-site mitigation opportunities have been fully evaluated and NCDOT has committed to avoidance and minimization measures to avoid unnecessary impacts to jurisdictional areas. NCDOT proposes to use the North Carolina Ecosystem Enhancement Program to provide the necessary compensatory mitigation for the unavoidable wetland impacts with the project.

As required for projects in the design-build process, staging areas, borrow and waste areas, and haul road impacts have been identified prior to the submission of the permit application. All staging and waste areas will be located entirely in uplands. Eight borrow areas are still under consideration, of which six will likely be used for this project as shown in the attached site location map and Exhibit A). These borrow areas will not impact jurisdictional resources under Section 404 of the Clean Water Act. However, the borrow site located south of Greens Cross Road near the center of the project contains two small (0.66 acre total) isolated wetlands. The USACE verified that these wetlands are isolated, and an isolated wetlands addendum is attached for NCDWQ review. This impact is necessary to avoid using an alternate borrow source that would involve construction of a haul road through high quality wetlands. Instead, the proposed borrow site allows for the use of the existing timber haul road with minor widening and much less impact. Haul road impacts for the borrow site discussed above are included in the impact summary. Exhibit C presents the location of the haul roads and the impacts associated with its improvements. The impacts are limited to 0.02 acres of temporary fill and a pipe extension along 49 linear feet of perennial stream channel. Haul road impacts will be temporary, and the areas will be re-graded to original contours and reforested when the project is completed. Stream banks will be returned to existing conditions and re-vegetated. A reforestation detail is provided within this permit application. The only other haul road impact is at Site 1 (Exhibit B) through the pond that will be drained for roadway construction. These impacts have been included in the permit impact calculations and are shown on the attached plans.

The project is identified as State Project No. 6.019001T, TIP No. R-2404A.

Overall plans showing the location of the proposed construction and impact sites are included with this public notice. Additional detailed plans, including NCDOT's cover letter and supplemental information, dated September 13, 2005, and information about the North Carolina Ecosystem Enhancement Program, may be reviewed at the U.S. Army Corps of Engineers Regulatory Field Office at 107 Union Drive, Suite 202, Washington, North Carolina 27889, or at the offices of the North Carolina Division of Water Quality at the address shown below.

Other Required Authorizations

This notice and all applicable application materials are being forwarded to the appropriate State agencies for review. The Corps will generally not make a final permit decision until the North Carolina Division of Water Quality (NCDWQ) issues, denies, or waives State certification required by Section 401 of the Clean Water Act (PL 92-500). The receipt of the application and this public notice in the NCDWQ Central Office in Raleigh

serves as application to the NCDWQ for certification. A waiver will be deemed to occur if the NCDWQ fails to act on this request for certification within sixty days of the date of the receipt of this notice in the NCDWQ Central Office. Additional information regarding the Clean Water Act certification may be reviewed at the NCDWQ Central Office, Transportation Permitting Unit, 2321-Crabtree Boulevard, Raleigh, North Carolina 27604-2260. All persons desiring to make comments regarding the application for certification under Section 401 of the Clean Water Act should do so in writing delivered to the North Carolina Division of Water Quality (NCDWQ), 1650 Mail Service Center, Raleigh, North Carolina 27699-1650 Attention: Mr. John Hennessy by 7 November 2005.

The applicant has not provided to the Corps, a certification statement that his/her proposed activity complies with and will be conducted in a manner that is consistent with the approved North Carolina Coastal Zone Management Program. Pursuant to 33 CFR 325.2(b)(2), the Corps can not issue a permit for the proposed work until the applicant submits such a certification to the Corps and the North Carolina Division of Coastal Management (NCDCM), and the NCDCM notifies the Corps that it concurs with the applicant's consistency certification.

Essential Fish Habitat

This notice initiates the Essential Fish Habitat (EFH) consultation requirements of the Magnuson-Stevens Fishery Conservation and Management Act. The Corps' initial determination is that the proposed project will not adversely impact EFH or associated fisheries managed by the South Atlantic or Mid Atlantic Fishery Management Councils or the National Marine Fisheries Service.

Cultural Resources

The Corps has consulted the latest published version of the National Register of Historic Places and has determined that registered properties, or properties listed as being eligible for inclusion therein are located within the project area and/or will be affected by the proposed work. The proposed project will impact two archaeological sites (Sites 31BR192** and 31BR201/201**) eligible for listing on the National Register of Historic Places. The State Historic Preservation Office (SHPO) concurred with the eligibility of these two sites on July 16, 2002. Preparation of a Memorandum of Agreement for Recovery of Significant Information from Archaeological Sites 31BR192** and 31BR201/201** has been completed and signed and is in the process of being forwarded to the Advisory Council on Historic Preservation for filing. Upon completion of the Data Recovery efforts, the NCDOT will prepare and forward a Management Summary to the SHPO detailing the results of the Data Recovery field investigations. The Management Summary will contain sufficient information to demonstrate that the field investigation portion of the Data Recovery Plan has been implemented. Upon acceptance of the recommendations contained in the Management Summary, the SHPO will issue the

NCDOT documentation that the Data Recovery field investigations have been completed. Staging and borrow areas outside the original study limits are currently being reviewed for archaeological resources by a qualified subcontractor. The results of these surveys will be submitted to NCDOT and SHPO for review and concurrence prior to construction.

Endangered Species

The Corps has reviewed the project area, examined all information provided by the applicant and consulted the latest North Carolina Natural Heritage Database. Based on available information, the Corps has determined pursuant to the Endangered Species Act of 1973, that the proposed project will have no effect on federally listed endangered or threatened species or their formally designated critical habitat. See Table 5 below for a description of the Federal Listed Endangered or Threatened Species for Bertie County.

Table 5: Federally-Listed Protected Species for Bertie County, NC *

<i>Scientific Name</i>	<i>Common Name</i>	<i>Federal Status</i>
<i>Haliaeetus leucocephalus</i>	Bald eagle	Threatened – Proposed for Delisting
<i>Picoides borealis</i>	Red-cockaded woodpecker (RCW)	Endangered
<i>Acipenser brevirostrum</i>	Shortnose sturgeon	Endangered

- Amended to include those species listed by the NC Natural Heritage Program to occur in Bertie County

Surveys for RCW were performed for the original NRTR. A biological conclusion of “No Effect” was reached for this species. On May 19, 2004, USFWS issued a letter of concurrence stating that the Service concurs that this project will have “No Effect” on RCW populations. Minor changes to the roadway alignment have occurred during final design. All changes are within the area covered by the original survey.

The bald eagle, although not listed for Bertie County by the USFWS, is shown as occurring within Bertie County by the North Carolina Natural Heritage Program element occurrence database. No suitable habitat exists for the bald eagle within the project area, with the exception of the Cashie River. Surveys for bald eagles and their nests have been performed at the location of the bridge crossing. No occurrences of this species were noted on the site. Suitable habitat within the project area will be resurveyed prior to construction.

While the shortnose sturgeon is also listed by NCNHP for Bertie County, no surveys have been performed for this species. The construction moratoria for in-water work, which lasts from February 15 to September 30, will limit potential for impacts to this and other anadromous species. Moratoria conservation measures, to be used during construction in non-inundated wetland areas, will include using silt fence to completely contain the construction zone, using a turbidity curtain to separate the construction area

from the Cashie River, and implementation of these two measures prior to commencement of the moratorium. The top-down construction method used for the dual bridges will also serve to limit temporary impacts to these waters by eliminating the need for a work bridge or other construction access.

Evaluation

The decision whether to issue a permit will be based on an evaluation of the probable impacts, including cumulative impacts, of the proposed activity on the public interest. That decision will reflect the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the proposal must be balanced against its reasonably foreseeable detriments. All factors which may be relevant to the proposal will be considered including the cumulative effects thereof; among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, flood plain values (in accordance with Executive Order 11988), land use, navigation, shoreline erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, considerations of property

ownership, and, in general, the needs and welfare of the people. For activities involving the discharge of dredged or fill materials in waters of the United States, the evaluation of the impact of the activity on the public interest will include application of the Environmental Protection Agency's 404(b)(1) guidelines.

Commenting Information

The Corps is soliciting comments from the public; Federal, State and local agencies and officials, including any consolidate State Viewpoint or written position of the Governor; Indian Tribes and other interested parties in order to consider and evaluate the impacts of this proposed activity. Any comments received will be considered by the Corps to determine whether to issue, modify, condition or deny a permit for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water quality, general environmental effects and the other public interest factors listed above. Comments are used in the preparation of an Environmental Assessment (EA) and/or an Environmental Impact Statement (EIS) pursuant to the National Environmental Policy Act (NEPA). Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

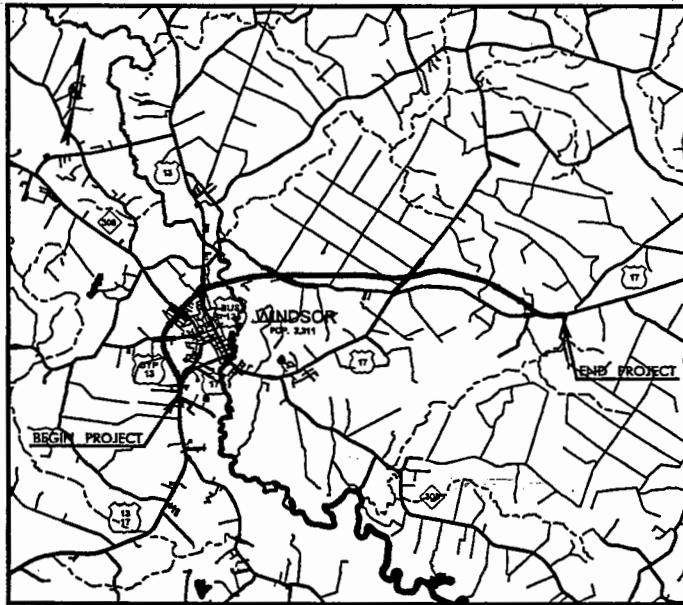

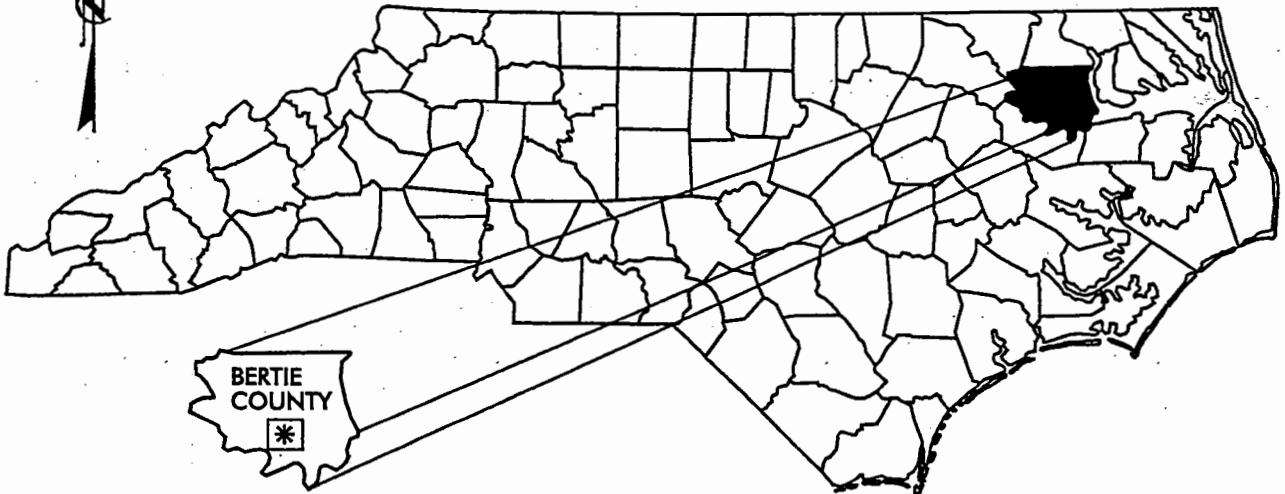

Any person may request, in writing, within the comment period specified in this notice, that a public hearing be held to consider the application. Requests for public hearings shall state, with particularity, the reasons for holding a public hearing. Requests for a public hearing shall be granted, unless the District Engineer determines that the issues raised are insubstantial or there is otherwise no valid interest to be served by a hearing.

Written comments pertinent to the proposed work, as outlined above, will be received by the Corps of Engineers, Wilmington District, until 5pm, 14 November 2005.

Comments should be submitted to

BERTIE COUNTY

LOCATION: US 17 (WINDSOR BYPASS) FROM US 13/17,
SOUTH OF WINDSOR, TO EAST OF SR 1503
(DAVIS ROAD)

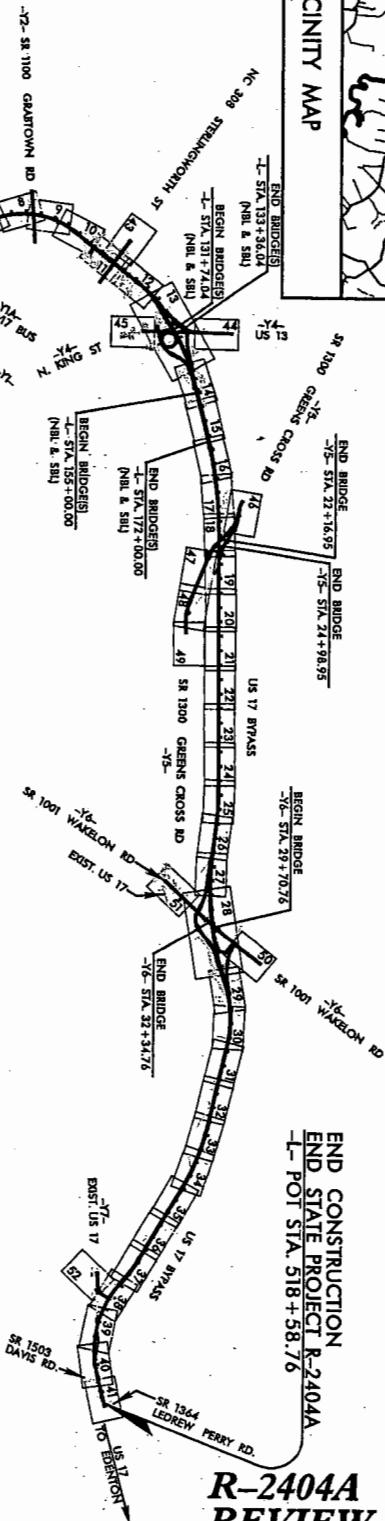

**TYPE OF WORK: DESIGN-BUILD AS SPECIFIED IN
THE SCOPE OF WORK CONTAINED
IN THE DESIGN-BUILD PACKAGE**

NAME	PERMIT NUMBER	PERIOD	TYPE	STATUS
N.C.	R-2404A	1	PERMIT	PENDING
	C201236		PERMIT NUMBER	CONTRACT NO.
			6.019000T &	PLANNING &
			344241.1	PE
				CONSTR.
	344243.7			

See Sheet H-4 For Index of Sheets

END CONSTRUCTION
END STATE PROJECT R-2404A
-L- POT STA. 518+58.76

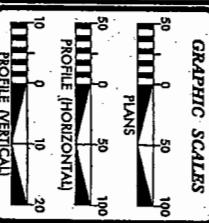

**R-2404A PERMIT
REVIEW SET**

NOTES:

- 1) PROPOSED US 13 AUS 17 BYPASS IS A PARTIAL CONTROLLED-ACCESS PROJECT WITH ACCESS BEING LIMITED TO POINTS AS SHOWN ON THE PLANS.
- 2) THE PROPOSED NEW LOCATION US 17 BYPASS IS A CONTROLLED-ACCESS PROJECT WITH ACCESS BEING LIMITED TO INTERCHANGES.
- 3) CLEANING ON THIS PROJECT SHALL BE PREPARED TO THE LIMITS ESTABLISHED BY METHOD X.

REV. SHEET NO. 12
ROADWAY DESIGN HYDRAULIC
BARNHILL CONTRACTING COMPANY

ERI HER Engineering, Inc.
Engineering, Surveying & Construction
Preliminary Plans
No work has commenced

BARNHILL
CONTRACTING
COMPANY

NOTES. SEE SHEET NO. 57-59 FOR L PROFILE.
ALL DRIVEWAY RADII MADE 20' UNLESS OTHERWISE NOTED.
FIRST 5' OF DRIVEWAY MAY BE USED FOR CLEANING FROM SLOPE
STORY 5' AND MAY BE USED FOR INSTALLATION
OF SEDIMENT & EROSION CONTROL MEASURES.

MATCH LINE STA. 118+00 ← SEE SHEET NO. 13

PROJECT REFERENCE NO.	SHEET NO.

1

PRELIMINARY PLANS
DO NOT USE FOR CONSTRUCTION

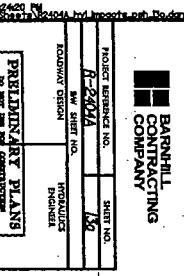

BARNHILL
CONTRACTING
COMPANY

 FILL IN SURFACE WATER
 FILL IN WETLAND
 EXCAVATION IN WETLAND
 MECHANIZED CLEARING

PAVEMENT TO BE OBLITERATED

**FIRST 5' OF MECHANIZED CLEAING FROM SLOPE
STAKE LINE MAY BE USED FOR INSTALLATION
OF SEDIMENT & EROSION CONTROL MEASURES.**

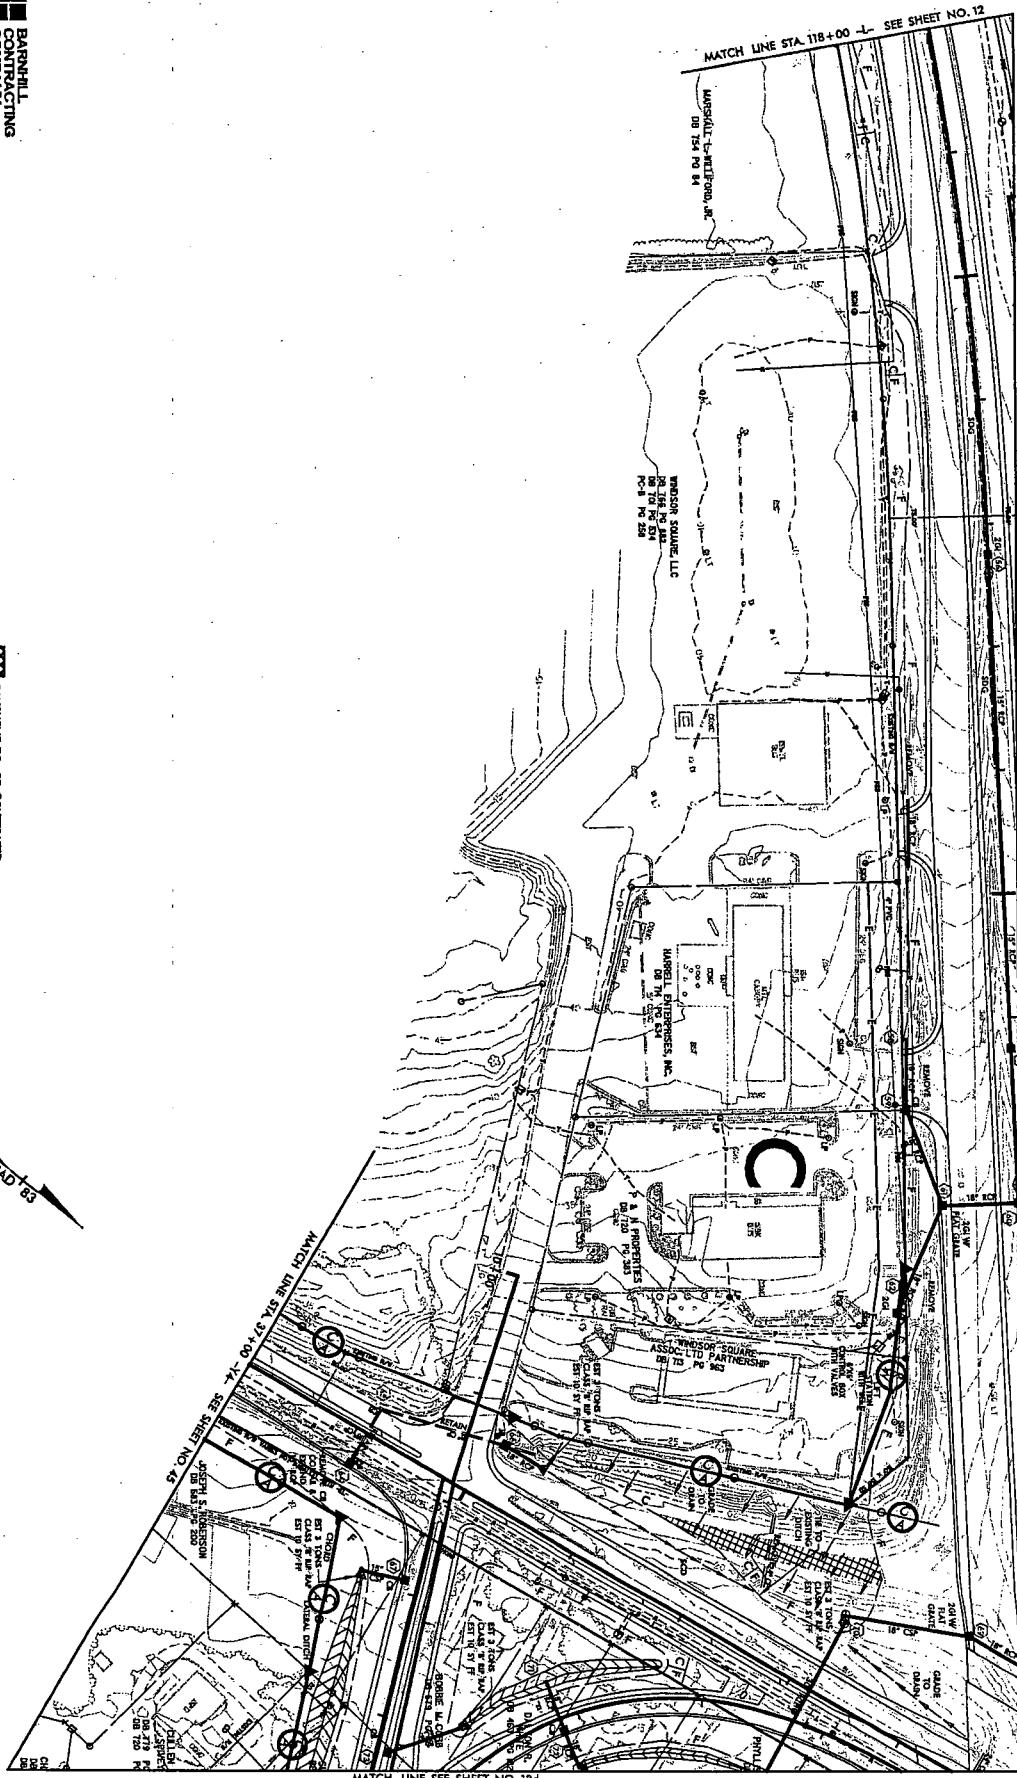

NOTES: SEE SHEETS NO. 38-49 FOR -4- PROFILE.
 SEE SHEET NO. 76 FOR -4A- PROFILE.
 SEE SHEET NO. 77 FOR -4B- PROFILE.
 SEE SHEET NO. 78 FOR -4C- PROFILE.
 SEE SHEET NO. 79 FOR -4D- PROFILE.
 SEE SHEET NO. 80 FOR -4E- PROFILE.
 SEE SHEET NO. 81 FOR -4F- PROFILE.
 SEE SHEET NO. 42 FOR STRUCTURE DETAIL.
 ALL CPT TO BE ROD AND LUG CONNECTED.
 DO NOT PLACE ROCK IN BED OF
 JURISDICTIONAL STREAMS.
 FIRST 5' OF MECHANIZED CLEARING FROM SLOPE
 STATE LINE MAY BE USED FOR INSTALLATION
 OF SEDIMENT & EROSION CONTROL MEASURES.

PAVEMENT TO BE OUTLINED
 SEE SHEETS NO. 38-49 FOR -4- PROFILE.
 SEE SHEET NO. 76 FOR -4A- PROFILE.
 SEE SHEET NO. 77 FOR -4B- PROFILE.
 SEE SHEET NO. 78 FOR -4C- PROFILE.
 SEE SHEET NO. 79 FOR -4D- PROFILE.
 SEE SHEET NO. 80 FOR -4E- PROFILE.
 SEE SHEET NO. 81 FOR -4F- PROFILE.
 SEE SHEET NO. 42 FOR STRUCTURE DETAIL.
 ALL CPT TO BE ROD AND LUG CONNECTED.
 DO NOT PLACE ROCK IN BED OF
 JURISDICTIONAL STREAMS.
 FIRST 5' OF MECHANIZED CLEARING FROM SLOPE
 STATE LINE MAY BE USED FOR INSTALLATION
 OF SEDIMENT & EROSION CONTROL MEASURES.
